Strategic Analysis:BMW Group's Global Performance & EV Transition

Business and Data Visualization Context

Audience:Who is this for?

The target audience are the Strategic Stakeholders,Asset Managers and the Investors.Seeks Value driven narrative that proves BMW is leveraging global battery trends to secure long term market leadership.

What I want them to Know?

The company is actively finding the transition to the next generation of electric mobility.

The Manufacturing network has successfully shifted toward high volume electric vehicle production and ready for global demand.

The brand is rapidly closing the gap with pure play electric competitors.

How I am using Data to make my Point

In this report,Dataset has been used to strengthen the strategic narrative.Here Clutter is the Enemy principle is also applied across all charts.Also data is used to translate technical milestones into financial value.By connecting the 2018 pivot to the 275% growth surge,) demonstrate that BMW's investment was a perfectly timed strategic move.These visuals show audience that BMW's operational resilience has successfully turned global infrastructure scaling into sustainable competitive advantage.

Data Exploration,Preprocessing & Discussion

Kaggle datasets were insufficient,raw data is manually extracted from BMW 2024 Group Report.

High variance values are adjusted and ISO 3 country codes are integrated.

Data is separated into distinct Owned vs Partner Sites.

Some data points are mathematically shrink for better visualization.

Applied if-else logic to maintain clutter is the enemy philosophy.
